If you’re feeling a little unsure about choosing investments from your organization’s retirement plan, don’t worry. Your employer is helping you simplify the process with RetireView®.

Here’s what it is
RetireView is an investment educational service with 20 different models using a variety of different levels of risk and asset classes. Your employer populates the models with the plan’s investment options, suggesting a mix of investments that may be right for you. We know it may sound complicated, so let us break it down.

When choosing which model most aligns with your goals, consider asking yourself these two questions:

<table>
<thead>
<tr>
<th>How comfortable am I with risk?</th>
<th>How long do I have until I retire?</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>(≥16 years, 11–15 years, 6–10 years or ≤5 years)</td>
</tr>
</tbody>
</table>

Keep in mind that each model includes a mix of different kinds of investments from various asset classes. Using a mix of investments is important, because it can help to manage risk while also giving your savings a chance to grow over time.
Here’s what you get
RetireView is an online experience that has two features that you’ll want to know about to help you stay in tune with your investment strategy.

1  Automatic age adjustment
As you get closer to retirement, the model automatically makes adjustments to the investment mix, typically getting more conservative. That’s because you likely won’t have as much time to regain any losses. You have the flexibility to opt out of this feature, if you prefer.

2  Rebalancing
Some investment options may perform better over time and grow faster than others, causing your investment mix to differ from what you originally selected. Rebalancing helps keep your mix of investments in line. The schedule automatically defaults to quarterly rebalancing. You can choose to change your rebalancing frequency to annually or semiannually by logging in to your account at principal.com.

Here’s what you do
Take the Investor Profile Quiz at principal.com/investorprofilequiz to see how comfortable you are with risk. Then, based on the results, you can elect to allocate money according to a RetireView model.

Or, if you feel that model doesn’t fit you, you can choose one from the other 19 RetireView models at principal.com that you think aligns more closely with you.

See how easy that was?
Choosing investment options can be overwhelming. You can make your investments align with your individual goals with the help of RetireView.

Let’s connect.

Investors 0–5 years away from retirement are assumed to remain invested for at least 5 years after retirement.

Morningstar Investment Management LLC periodically reviews and may adjust the RetireView models’ asset allocation percentages based upon their economic outlook and current market conditions. Asset allocation models are presented here for illustrative purposes only. The actual investment category percentages may vary over time. Please see the RetireView Terms and Conditions document for a full discussion of the RetireView service, including how model allocation changes are conducted. For the most up-to-date RetireView allocations visit us at principal.com or call 800.547.7754.

Asset allocation and diversification do not ensure a profit or protect against a loss.

Important Information

Morningstar Investment Management LLC is not an affiliate of any company of the Principal Financial Group.

**Equity investment** options involve greater risk, including heightened volatility, than fixed-income investment options. **Fixed-income investment** options are subject to interest rate risk, and their value will decline as interest rates rise. **International and global investing** involves greater risks such as currency fluctuations, political/social instability and differing accounting standards. **Asset allocation** does not ensure a profit or protect against a loss. Fixed-income and asset allocation investment options that invest in **mortgage securities** are subject to increased risk due to real estate exposure. Review the RetireView Terms and Conditions for a full discussion of the features of this service, including rebalancing and automatic age adjustment of the populated models.

**Investing involves risk, including possible loss of principal.**

Risk/age tolerance models are created by Morningstar Investment Management LLC. Morningstar begins by analyzing asset classes and constructs long-term expected returns, standard deviations, and correlation coefficients. These form the inputs for the mean variance optimization, a statistical technique. Because forecasting is a critical and pivotal step in the asset allocation process, Morningstar develops proprietary capital market forecasts for each asset class using a combination of historical data, current market information and additional analysis. Each forecast becomes an input in portfolio creation.

The risk tolerance models (models) are intended to be used as an additional information source for retirement plan participants making investment allocation decisions. Pursuant to the Department of Labor Definition of Investment Education 29 C.F.R. §2510.3-21(b)(2)(iv), such models (taken alone or in conjunction with this document) do not constitute investment advice for purposes of the Employee Retirement Income Security Act (ERISA), and there is no agreement or understanding between Morningstar and us or any plan or plan fiduciary, or any participant who uses this Service, under which the latter receives information, recommendations or advice concerning investments that are to be used for any investment decisions relating to the plan. Accordingly, neither we nor Morningstar are a fiduciary with respect to your plan sponsor’s plan for purposes of this Service, including the features of rebalancing and aging. Following an asset allocation model does not ensure a profit or protect against a loss. Performance of the individual models may fluctuate and will be influenced by many factors. In applying particular asset allocation models to their individual situations, participants or beneficiaries should consider their other assets, income and investments (e.g., equity in a home, Social Security benefits, IRA investments, savings accounts and interests in other qualified and nonqualified plans) in addition to their interests in the plan.

Principal Life is not undertaking to provide investment advice in a fiduciary capacity or to provide impartial investment advice of any kind.
