4. Cost Basis Election Option Definitions

- **Average Cost (ACST):** Calculates the cost of shares in an account by averaging the cost of all purchases made after January 1, 2012. Shares will be redeemed in a first-in first-out order (FIFO) for the average cost method.
- **First-In First-Out (FIFO):** Shares acquired first in the account are the first shares distributed.
- **Last In First-Out (LIFO):** Shares acquired last in the account are the first shares distributed.
- **High Cost (HIFO):** Shares acquired with the highest cost per share are the first shares distributed.
- **Low Cost (LOFO):** Shares acquired with the lowest cost per share are the first shares distributed.
- **Loss/Gain Utilization (LGUT):** Distributes shares with losses before gains, consistent with the objective of minimizing taxes. For shares that yield a loss, shares owned one year or less (short-term) will be redeemed before shares owned more than one year (long-term). For gains, long-term shares will be redeemed before short-term gains. With favorable long-term gains rates, long-term gains are given priority over short-term gains to reduce tax liability.
- **Specific Lot (SLID):** Shareholder selects which lots to distribute at the time of each redemption.
