- Thirty-four percent consider themselves to be a Republican. Significantly more Baby Boomer (48%) business owners consider themselves Republicans than Millennial (28%) and Gen X (23%) business owners.
- Approximately one in four (26%) consider themselves to be a Democrat.

“Which of the following do you consider yourself to be?”
Base: 600 Business owners of U.S. firms with 10-500 employees

Methodology

The Principal Financial Well-Being IndexSM : Business Owners survey was conducted online within the United States by Harris Poll on behalf of the Principal Financial Group® between July 29 and August 25 among 600 business owners in companies of 10-500 employees.

Business Owners consisted of adults 21+ who own at least 5 percent of the company and are actively involved in making decisions for the business and managing the business in small and mid-sized (SMB) U.S. businesses (firm size 10-500 employees). Results were weighted as needed for representation of the SMB firms.

All sample surveys and polls, whether or not they use probability sampling, are subject to multiple sources of error which are most often not possible to quantify or estimate, including sampling error, coverage error, error associated with nonresponse, error associated with question wording and response options, and post-survey weighting and adjustments. Therefore, Harris Poll avoids the words “margin of error” as they are misleading. All that can be calculated are different possible sampling errors with different probabilities for pure, unweighted, random samples with 100 percent response rates. These are only theoretical because no published polls come close to this ideal.

Respondents for this survey were selected from among those who have agreed to participate in Harris Poll surveys. The data have been weighted to reflect the composition of the small to mid-sized U.S. businesses (10-500 employees). Because the sample is based on those who agreed to be invited to participate in the Harris Poll online research panel, no estimates of theoretical sampling error can be calculated.
